

CHAPTER THREE

STATE GOVERNMENT SOURCES FOR FIRE AND EMS

In addition to administering the dispersal of federal funds, many states also have their own mechanisms to provide support for local fire and EMS agencies. The following is a list of the major categories of state funding programs as well as examples of some of the programs found in various states.

- Low interest loans
- Insurance Surcharge (fire only)
- Driving-related fees and fines (EMS only)
- Surplus vehicles and equipment
- Special Purpose Grants
- Matching grants
- Technical assistance/support
- Subsidized training

LOW-INTEREST LOANS

Many states make loans available at 2-3 percent interest, over 10-20 years, for capital improvements and other projects. Such programs are often set up in a revolving fashion so that money paid back to the lender can be loaned out again to other fire/EMS agencies. One example is the program run by the Kentucky Fire Commission. Loans of up to \$50,000 are available to volunteer fire departments at an interest rate of 3 percent, repayable over a period of as long as 12 years. Payments are deducted from the department's annual State Volunteer Aid check. Texas has a similar program in place through the Texas Commission on Fire Protection. Loans of up to \$25,000 are available at a 2 percent interest rate over 10-20 years.

INSURANCE SURCHARGE

Some states, such as Virginia, Texas, Kentucky, and South Carolina, impose a surcharge on fire insurance premiums to underwrite the cost of fire protection. While these funds are often restricted to paying for the state's own fire-related expenses, in some states, this funding is directly or indirectly funneled into local programs.

The Commonwealth of Virginia's Department of Fire Programs is funded by a 0.8 percent assessment on all fire and combined insurance premiums from insurance companies licensed in the state. Approximately 75 percent of the money is allocated to towns, cities, and counties to conduct fire service training, improve regional or local fire service training facilities, purchase firefighting equipment, and purchase protective equipment and clothing. The allocation is made primarily in proportion to population, with a minimum of \$3,000 available for any eligible jurisdiction.

The insurance surcharge also funds a grant program for rural fire departments, defined as those with an ISO rating of 9 or 10. They may apply for a 50/50 matching grant program to install dry hydrant systems.

In another example, the state of Kentucky funds many programs aimed at local agencies through its 1.5 percent surcharge on insurance. The funds are distributed by the Kentucky Fire Commission, a 19 member panel appointed by the governor. Programs include the Incentive Pay Program for career personnel, State Aid Fund for volunteer fire departments, the Training Facility Grant Program, Survivor Benefit Program, Hepatitis B

FAX (502) 564-6552

vaccinations for fire service personnel, and the low-interest loan program mentioned earlier.

Through these programs, fire departments in Kentucky have been able to renovate firehouses, upgrade their SCBAs to NFPA specifications, and purchase a variety of new equipment, including large diameter hose.

Texas also provides aid to fire departments through a surcharge on insurance premiums. The state’s Fire Department Emergency Fund is administered by the Texas Commission on Fire Protection and includes two programs – a grant program for fire departments in need of equipment and the low interest loan program mentioned previously.

Approximately \$1 million is available each year, with 50 percent of the state funds allocated to the grant program, and the other 50 percent used for loans. Allocations from both programs are limited to \$25,000 per

department per year. Further regulations require the funds to be split equally between rural and municipal fire departments.

Texas Commission on Fire
Protection
PO Box 2286
Austin, TX 78768-2286
(512) 918-7100
FAX (512) 918-7107

Applications for both programs are reviewed and ranked, in order of need, by the Texas Commission on Fire Protection, a twelve-member panel appointed by the governor and approved by the Senate. Fire departments often use these funds for the purchase of protective clothing and breathing apparatus.

DRIVING RELATED FEES AND FINES

Since a major need for EMS stems from motor vehicle accidents, some states attach fees to motor vehicle registration or other vehicle-related services to fund parts of the state EMS programs.

Vehicle Registration Status

The Commonwealth of Virginia has a state EMS program funded entirely through a \$2 fee on motor vehicle registration. This fee, known as the “Two for Life” fund, brings in over \$10 million for Emergency Medical Services. Each month the Department of Motor Vehicles transfers the “Two for Life” revenues to the Commonwealth’s Department of Emergency Medical Services. The money is divided among various state EMS programs. Approximately 37 percent goes into administration of the Virginia Emergency Medical Services, including keeping track of the licensing and operations of EMS in the state. About \$1 million is divided among eight regional EMS councils which administer EMS training and operations and establish local protocols. About 25 percent of the money raised is channeled directly back to local non-profit EMS agencies where the vehicles were registered.

Another \$1.3 million goes to fund training programs for BLS and ALS providers, and \$250,000 goes to a state funded recruitment and retention program for EMS personnel. The remaining money, approximately \$3 million, goes to the Rescue Squad Assistance Fund. Any non-profit EMS agency in the state may apply for matching funds to purchase EMS equipment and vehicles. Rescue squads may not use money from the “Two for Life” program to match the state-supplied Rescue Squad Assistance Fund 50-50 grants. In the case of hardship, up to 80 percent may be funded by the state. This money is

FAX (804) 371-3543

restricted to patient care items; it may not be used for items such as building maintenance or construction. Each year a committee appointed by the Govern-

nor of Virginia ranks the requests in order of priority and then funds as many as possible until the funds are exhausted.

The state of Maryland has a coordinated statewide EMS system involving hospitals, area-wide trauma centers, specialty referral centers, and more than 480 ambulances. In addition, the statewide system has more than 24,000 trained providers, a state-of-the art communications center, and a med-evac helicopter operated by the Maryland State Police (MSP) Aviation Division. In 1992, Maryland adopted an \$8 surcharge on motor ve-

hicle registration fees. The surcharge is designed to provide a stable funding source to support the med-evac program, grants to

local fire, rescue, and ambulance services in all 24 political jurisdictions, Maryland Fire Rescue Institute, R Adams Cowley Shock Trauma Center, and Maryland Institute for Emergency Medical Services Systems itself. It is expected that the surcharge will generate approximately \$27 million annually for the EMS system statewide.

Traffic Citations Surcharge

Several Western states and Florida have adopted surcharges on traffic violation fines to support EMS on the basis that bad drivers increase the need for EMS services. In Florida, the Department of Health and Rehabilitative Services adds a surcharge to certain traffic citations such as driving under the influence of alcohol. The Department collects over \$10 million a year from this program. Fifteen percent of these funds are used to cover administrative costs; the remainder is dispersed throughout the state with the goal of improving and expanding emergency medical services.

The funds are dispersed through two state programs. A county-level cash award program distributes 45 percent of the funds back to each county on a percentage basis, depending on the amount of money contributed by

the county. The funds may be used in any manner to expand the EMS system, but not to supplant current budget funds.

The second program provides matching grants to any jurisdiction within the state. The applicant pays 25 percent of the proposed amount while the state pays the remaining 75 percent. No money distributed from the first program may be used for a matching grant in the second program.

FAX (850) 487-2911

Many jurisdictions have successfully improved their EMS systems as a result of these programs. These funds have

made it possible for them to purchase AEDs, develop an Emergency Vehicle Operator Course (EVOC), establish quality assurance programs, as well as bolster public education campaigns, purchase new vehicles, upgrade computer equipment, and offer a variety of training programs.

SURPLUS VEHICLES AND EQUIPMENT

Many second-hand fire and EMS vehicles are available through the state at little or no cost, especially to rural, volunteer fire departments. The challenge is finding them. Some may be available through the state agency responsible for forest and wildland fire protection, while others are available from the National Guard or local/re-

gional airports. Also, many states have offices specifically responsible for the dispersal of excess federal equipment. In some states, the Fire Marshal's office, either formally or informally, assists fire departments in procuring these surplus items.

In some states it is also possible for fire departments to purchase equipment, and other supplies, at state contract prices.

In Texas, a recently passed law [75 (R) HB 680] protects those who donate used or obsolete fire equipment to fire departments through the Texas Forest Service. Equipment refers to vehicles, tools, protective gear, breathing apparatus, etc. Donors of used fire/rescue equipment, as well as the Forest Service, are released from liability for civil damages should a defect in their donation cause personal injury, property damage, or death. Unless malice, gross negligence, recklessness or intentional misconduct can be proven, and as long as the donation was made in good faith, the donor and the Forest Service are not responsible for civil damages.

SPECIAL PURPOSE GRANTS

From time to time, some states earmark funds for a particular program area of interest. For example, New York State developed a grant program specifically targeted at reducing the incidence of arson. The program provided computers to hundreds of fire departments that were capable of compiling and analyzing not only arson data, but all types of fire data as well.

Additionally, excess funds are sometimes avail-

able available from the state Legislature at the end of a legislative session. These funds may become available in the form of grants to various groups within the state, including fire departments. Contact representatives in your area for more details as to the availability of funds and the process involved in applying to receive them.

MATCHING GRANTS

Matching grants are a common source of funds for local agencies at the state level. While either the federal or state government may fund these programs, the dispersal of funds is generally left up to a division of the state government. These grants are not handouts. Fire departments must be able to show that they have the funds available to match the amount they are requesting from the state. Depending on the state and the particular program a fire department might have to match the state dollar-for-dollar, while other programs may only require a department to have 20 percent of the amount it requests.

TECHNICAL ASSISTANCE

The office of the State Fire Marshal or of Emergency Medical Services, etc. can be a valuable source of information and assistance. Often, they provide building inspectors, fire/arson investigators, engineering and plan reviews, HAZMAT inspections, general fire safety education, as well as administering the state's Fire Incident Reporting System (FIRS). Further, for small departments with limited budgets, their handling of code enforcement and investigations is extremely important.

SUBSIDIZED TRAINING

In most states there is a designated academy or training center subsidized by the state. These academies offer a wide range of courses, from basic classes, such as Firefighter I/II, to more advanced classes for officers. Classes are generally offered either for free or at a reduced price to anyone affiliated with an accredited fire department/rescue squad/ambulance service in the state. Also, scholarships may be available through the Office of the State Fire Marshal, State Commission on Fire Protection, State Firefighters' Association, and others, to attend classes in fire science at local vocational schools or state universities. Further, in some locations, individual counties also offer training free or at reduced cost to affiliates of fire departments in the county.

For example, the state of Maryland provides free training through the Maryland Fire and Rescue Institute (MFRI). All courses offered through MFRI are free to anyone affiliated with an accredited fire department in the state of Maryland.

OTHER AGENCIES TO CONTACT

Although these agencies may not distribute funds, they may have information as to where to look or they may be able to provide other assistance to local departments. A few to try:

- Department of Health (Especially the EMS Division)
- Department of Transportation
- Department of Natural Resources (Particularly the Forestry Division)
- Department of Insurance (often oversee the State Fire Marshal)
- Department of Emergency Management

STATE-BY-STATE FUNDING SOURCES FOR EMS

Most, but not all, state governments provide some kind of financial assistance to local fire departments and rescue squads to improve the quality of emergency care. State governments may supply support services such as training, data analysis and collection, system planning for 9-1-1 service, and certification programs.

Table 3.1 is a breakdown, state-by-state, of the particular programs available to local EMS agencies. Federal programs are included as well; these are noted in *italics*. Programs specifically directed at fire departments/rescue squads are listed in the following section. Generally, fire departments that provide EMS or rescue services are eligible to apply for EMS programs; they are not usually reserved for EMS-only organizations.

Although every effort was made to compile an accurate listing of programs, some may have inadvertently been overlooked. These programs may not have been known to the person contacted in that state, or included in the state literature reviewed. Regardless, this list should provide agencies looking for funds with a good starting point for information about the programs available to them. Further, by seeing the options available in other states, departments may be able to encourage the development of new programs their own state.

STATE FUNDING SOURCES — FIRE/RESCUE SERVICES

Many state resources are available to assist local fire departments. State agencies that specialize in health, education, transportation, or insurance may have programs available to fire departments and emergency medical service organizations, in addition to the programs from the state fire marshal's office or other state fire agencies. Rural fire departments or departments that face wildland or wildland-urban interface firefighting may be eligible for state or federal assistance through state departments of forestry, interior, farm bureaus, or similar agencies.

Funds may be available directly through low interest loans or grant programs, or indirectly through subsidized training courses. Financial savings may be available through state contract equipment purchasing plans. Some of these state programs are financed by federal funds that are administered at the state level.

Table 3.2 provides an outline of services available on a state-by-state basis. Federally funded programs are listed in *italics*. Note the disparity in state programs from state to state. Some small states have large programs, and some large states have no programs. The programs on the list are subject to change, as their funding often depends upon annual appropriations from the state or federal governments. Local fire departments should check with several agencies in their state to find out exactly what programs are currently available and what programs may

become available in the future. While there may be additional programs, the list should give fire departments a starting place for finding out about their state's programs, and show the range available in other states.
